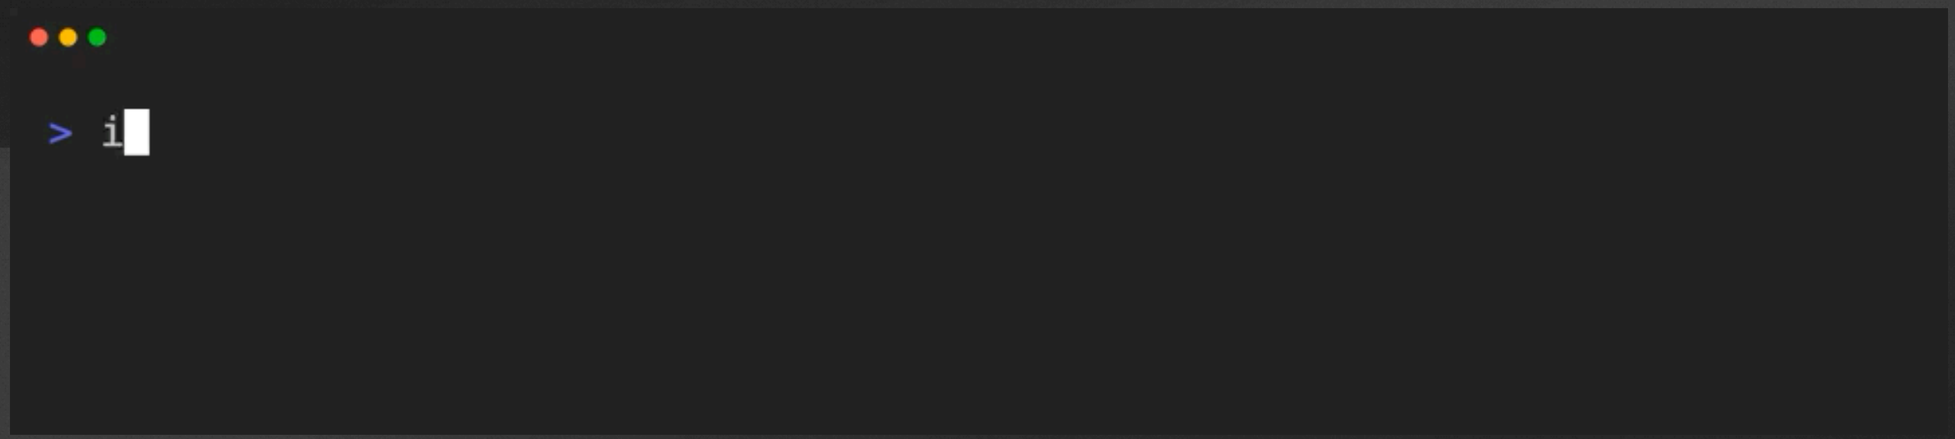
🆕 in iOS 16.2

The LDMGlobalEnabled setting is read in the ObjC function:

```
+[NSUserDefaults(Email) em_lockdownModeEnabled]
```



Which in turn is called by 2 other dylibs that import Email:

Message

em_lockdownModeEnabled is called in the ObjC function:

```
+[MFAttachment isSinglePagePDF:]
```

Where if the device is in Lockdown Mode it disables PDF parsing and logs the following message:

"Lockdown Mode detected, disabling PDF parsing"
