TelephonyUtilities

NEW in iOS 16.1

The **LDMGlobalEnabled** setting is read in the function:

```
TULockdownModeEnabled( );
```

That function is queried in the following 2 functions:

- `-[TUCall initWithUniqueProxyIdentifier:endpointOnCurrentDevice:notificationCenter:]`
 - appears to just set the `TUCall->lockdownModeEnabled` property.
- block func that invokes `-[TUMomentsController initWithDelegate:dataSource:]`
 - which just sets the `TUMomentsController->lockdownModeEnabled` property.

This means that anything using `TUCall` or `TUMomentsController` will be now be **Lockdown Mode** aware.

Both classes have getters for the property:

- `-[TUCall lockdownModeEnabled]`
- `-[TUMomentsController lockdownModeEnabled]`
