# SoftwareUpdateServices

The `LDMGlobalEnabled` setting is read in the ObjC function:

```
+[[SUUtility isLockdownModeEnabled]
```

Which is called via a `objc_msgSend` stub from the ObjC function:

```
+[[SUUtility autoDownloadTimeInterval] {  
    if ( [SUUtility isEqualToString:@"Internal"] ) && ![SUPreferences.sharedInstance  
scanWeeklyInternally:v4] )  
    {  
        SULogInfo(@"[Auto scan] Apple Internal: Downloading every 2 hours");  
        interval = 7200.0;  
    }  
    else  
    {  
        if ( [SUUtility isLockdownModeEnabled] )  
            SULogInfo(@"[Auto scan]: Lockdown mode enabled: Downloading every 1 day");  
        else  
            SULogInfo(@"[Auto scan] Beta: Downloading every 1 day");  
        interval = 86400.0;  
    }  
    return interval;  
}
```
