# How Bad Is It?

In the KEXT [com.apple.driver.AppleLockdownMode](#)

```
bool AppleLockdownMode::start(IOService *a1, IOService *a2)
{
    v2 = IOService::start(a1, a2);
    if ( v2 )
        IOLog("LockdownMode: started (no-op)\n");
    else
        IOLog("LockdownMode: failed to start");
    return v2;
}
```

Appears to be a no-op for now
