PhotoLibraryServicesCore

The **LDMGlobalEnabled** setting is checked in the block invocation:

```
__PLIsLockdownMode_block_invoke()
```

Which checks the setting and sets the result to global **PLIsLockdownMode_isLockdownMode**

That function is called by the stub function **PLIsLockdownMode()**, which lives in one of the DSC stub island subcaches.

This in turn is called by the stub function **PLCanEnableSharedStreamsForAccount()** which is implemented in the **PhotoLibraryServices** framework.

Here is a snippet:

```
return provisionedDataclassesContainsObjectAccountDataclassSharedStreams \
| ~PLPlatformSharedStreamsSupported( )
| IsRamped
| MCFeatureSharedStreamAllowed == 2
| ~MGGetBoolAnswer( "PhotoSharingCapability" )
| PLIsEDUMode( )
| PLIsLockdownMode( );
```

That in turn is called by the function `-[PhotosAccountNotificationPlugin account:willChangeWithType:inStore:oldAccount:]` in the **PhotosAccountNotificationPlugin** bundle.

This corresponds to Apple's summary mentioned above when **Shared Albums** are removed from the Photos app, and new **Shared Album** invitations are blocked.
