PreferencesUI
The framework that handles the Preferences UI in the Settings.app

The `LDMGlobalEnabled` setting is check has been *inlined* in the ObjC function:

```
-[PSUIPasscodeLockController specifiers]
```

Here is a (cleaned up) snippet:

```
LDMGlobalEnabled = [NSUserDefaults objectForKey:@"LDMGlobalEnabled" inDomain:@"NSGlobalDomain"];
PKIsUSBRestrictedModeDisabledByMobileAsset(args..., LDMGlobalEnabled);
if LDMGlobalEnabled {
  [specifierForID_ALLOW_ACCESS_WHEN_LOCKED setProperty:PSUI_LocalizedStringForPasscodeLock(@"ACCESSORIES_ON")
  forKey:@"footerText"];
}
```

Notice in /System/Library/PrivateFrameworks/PreferencesUI.framework/LockdownMode.loctable

```
"en" => {
  "ACCESSORIES_OFF" => {
    "NSStringDeviceSpecificRuleType" => {
      "ipad" => "Accessories are blocked from connecting to your iPad when Lockdown Mode is turned on."
      "iphone" => "Accessories are blocked from connecting to your iPhone when Lockdown Mode is turned on."
      "ipod" => "Accessories are blocked from connecting to your iPod when Lockdown Mode is turned on."
    }
  }
}
```

PreferencesUI

You can see in the screen shot that this is setting the text that appears below the Accessories toggle setting.
